Tea Tree Gully Sustainable Sewers Program

Community update: overall program stages

The Tea Tree Gully Sustainable Sewers Program will transition all properties connected to the City of Tea Tree Gully Community Wastewater Management System (CWMS) to a modern sewer system that delivers nationally accepted levels of service for its customers.

Project delivery stages are now available. We will continue to keep you informed and assist you when the time comes to transition your property to our sewer network.

Project update

Over the last nine months, we have worked with the City of Tea Tree Gully and used customer feedback to guide the planning and prioritisation process for our staged approach to transition customers to our sewer network. This has informed how the program can minimise impacts and increase benefits for the community.

CWMS customers will be transitioned in stages, with prioritisation based on a range of criteria including condition assessment of the existing CWMS and community feedback.

As a result, we have identified three separate stages for implementation of the upgrades:

Stage 1 includes approximately 400 properties (in yellow) and comprises groups of high priority areas with significant performance issues in Modbury North, St Agnes and Banksia Park, aligned with Council priorities and feedback from the community.

We will start construction in late 2021 and complete customer connections by late 2022.

Stage 2 includes around 1,600 properties (in blue) within the suburbs of St Agnes, Banksia Park, Fairview Park, Tea Tree Gully, Vista and Surrey Downs. Construction is planned to begin mid-2022 and completed mid-2024.

Stage 3 comprises over 2,000 properties (in green) within remaining areas in Fairview Park, Banksia Park, Tea Tree Gully, Redwood Park, Ridgehaven, Vista, Hope Valley, Highbury and Modbury.

Construction is planned to begin 2024 and completed within our 2024-28 regulatory period.

Further information

Customers will not be billed by SA Water until after they have been transferred to our network and services.

An overview of the program has been submitted to Council for their feedback. Further information on how you can provide feedback and get a better understanding of the program is available at watertalks.sawater.com.au.

If you would like to discuss the project stages and what this means for you, call our Stakeholder Engagement Adviser on **7424 2489**.
